

I. Getting Started with Trello

This topic describes how to install and get started with Trello.

Perform the following steps:

1. Navigate to the following link: <https://trello.com/en-US/platforms>
A webpage opens, where you can select the options to install the application, based on your platform.
2. Choose the method of installation:
 - To install the mobile client, under Mobile:
 - for iOS, click or tap *Download on the App Store*.
 - for Android, click or tap *Get It On Google Play*.
 - To install the desktop client, under Desktop:
 - for MacOS, click *Download on the App Store*.
 - for Windows, click *Get it from Microsoft*.

The download webpage opens.

3. Review the system requirements for your platform.
4. To begin the installation process, on the download webpage, click *Get*.
The app store opens in your operating system.
5. In the app store, click *Get*.
The installation starts automatically, and a message or button displays, indicating that the application is ready to open.
Note: If the installation does not start automatically, click *Install*.
6. Select the option to open the application.
The Welcome to Trello page opens.
7. To proceed, click *Continue*.
You are prompted to either log in or sign up for a Trello account.
8. Choose one of the following:
 - If you have an existing Trello account, click *Login* and then enter your credentials when prompted.
 - If you are a new user, click *Sign Up*.
Provide a new username and password. Optionally, you can sign up with a Google, Microsoft, or Apple account.

If you are a new user, a prompt appears, where you can enter your team name, select your team type, and loop in team members.
9. Click *Continue*.
A message displays, indicating that you are now ready to use Trello.
10. To begin using Trello, click *Get Started*.

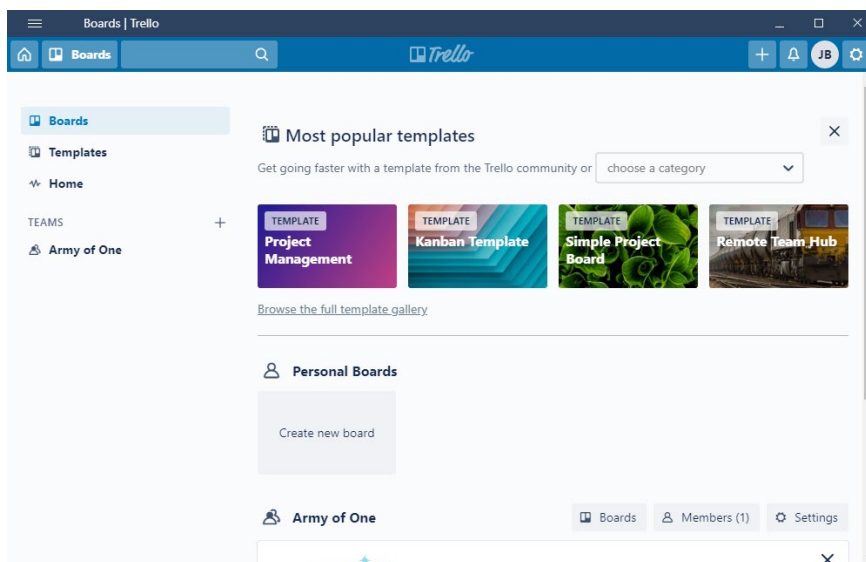

II. Navigating the Trello Interface

Trello is a Kanban-based project management application. It enables you to track the different tasks associated with a project through the use of task boards and columns that indicate different stages of completion (for example, Waiting, In Progress, Completed, and Blocked). As individual tasks are progressed, they can be moved through the columns that correspond to their status. Through this methodology, it is possible to see and manage the whole project, as well as each task at a granular level.

A notable feature of Trello is the ability to employ specialized templates for different task boards, classified by industry and/or purpose. For example, if you select a Project Management template from the left-hand Navigation Pane, the Display Canvas populates with different templates that fall under the Project Management category, displayed as thumbnails with titles. For example, under Project Management, you have the option to select different templates, such as Government Project Management or IT Project Workflow.

While some templates are provided by Trello, many are user submissions that can be built and submitted through the application, and leveraged for a tailored approach. Similarly, if you create a customized template, you can submit it, using the functionality within the application, so that other users may access it.

The Trello landing page is shown in the following image.

It contains the following components:

- **Ribbon.** The main taskbar of the interface, where you can create and search for boards and templates, manage notifications, and access your user profile. For more information, see [Using the Ribbon](#).
- **Navigation Pane.** A tree view directory that contains your boards, templates, and teams. For more information, see [Using the Navigation Pane](#).

- **Display Canvas.** The main, context-based work area of Trello. Use this canvas to access and share templates, manage projects and tasks, and create and manage teams. For more information, see [Using the Display Canvas](#).

Using the landing page functionality, you can create and manage boards for your projects. For more information, see [Working with Boards](#).

Using the Ribbon

The ribbon is shown in the image below.

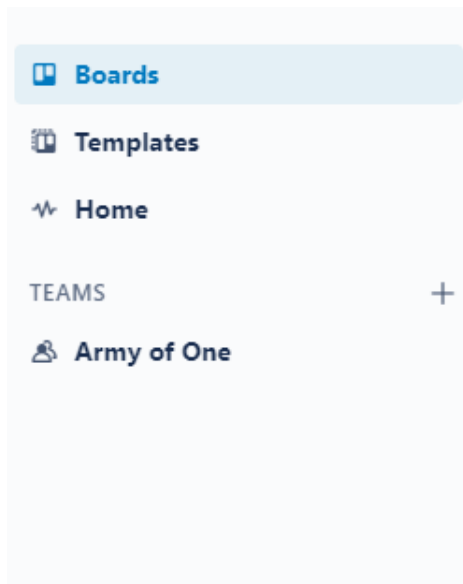

It contains the following components:

- **Menu icon.** Displayed as a hamburger menu icon (≡) in the top-left corner of the ribbon. Accesses the File menu, which contains the following commands:
 - **File.** Accesses the File command, where you can select the following options:
 - **New Window.** Opens a new window with a separate landing page.
 - **Quick Card.** Provides the option to quickly create a card. Clicking this option opens a dialog box, where you can provide a Card Title, Description, and specify the Board and List with which it is associated. To create the card, click *Create*.
 - **Preferences.** Opens the Preferences menu, where you can toggle settings related to the Trello application, access license information, and see information about your Trello installation.
 - **Exit.** Exits the application.
 - **Edit.** Accesses the Edit command, where you can select the following options:
 - **Undo.** Undoes an action.
 - **Redo.** Redoes an action.
 - **Cut.** Cuts a selected object.
 - **Copy.** Copies a selected object.
 - **Paste.** Pastes a cut or copied object.
 - **Paste and Match Style.** Pastes a cut or copied object, and matches it to the style of its destination.
 - **Delete.** Deletes an object.
 - **Select All.** Selects all objects.
 - **Copy Current URL.** Copies the current URL.
 - **Paste URL & Go.** Pastes the URL and navigates to its associated webpage.
 - **View.** Accesses the View command, where you can select the following options:
 - **Reload.** Reloads the landing page.
 - **Toggle Full Screen.** Toggles between full screen and window view.
 - **Actual Size.** Restores the view to its actual size.
 - **Zoom In.** Increases the size percentage of the window.

- **Zoom Out.** Decreases the size percentage of the window.
 - **Print.** Opens the Print dialog box, where you can print your current view.
- **History.** Accesses the History command, where you can select the following options:
 - **Back.** Navigates to a previous page.
 - **Forward.** Navigates to the next page.
 - **Boards.** Accesses the Boards command, where you can select the following options:
 - **Open Boards Page.** Opens the Boards page in the Display Canvas.
 - **My Cards.** Opens the Cards tab in the Profile menu, where you can view and manage your cards.
 - **Go to Default Board.** Navigates to your default board.
 - **Set Current Board as Default.** Sets your current board as the default.
 - **Reset Default Board.** Resets the default board.
 - **Help.** Accesses the Help command, where you can select the following options:
 - **Visit Trello Website.** Navigates to the Trello website.
 - **Contact Trello Support.** Opens the Trello support page, where you can access technical content, ask questions in the Trello Community forum, or open a case with the Trello technical support team.
 - **Export logs.** Exports a log file of your current session to your machine.
 - **Trello Keyboard Shortcuts.** Opens a webpage that displays commonly-used keyboard shortcuts for the Trello application.
 - **Trello Help.** Accesses the online Help.
- **Home icon.** Navigates to the default landing page.
 - **Boards icon.** Enables you to search for boards, view starred and recent boards, create new boards, and view closed boards. You also have the option to always keep the Boards menu open.
 - **Search bar.** Enables you to search Trello for specific boards, by name. The Search bar also stores saved searches for quick access.
 - **Trello icon.** Navigates to the default landing page, similar to the Home icon.
 - **Create icon.** Displayed as a plus icon (+), the Create icon enables you to create a board, start with a template, or create a team.
 - **Notifications icon.** Enables you to view and manage your notifications.
 - **Account icon.** Enables you to view information related to your user account, including Profile and Visibility, Activity, Cards, and Settings. You can also access the online Help, keyboard shortcuts page, and log out of your account.
 - **Preferences icon.** Opens the Preferences menu, where you can toggle settings related to the Trello application, access license information, and see information about your Trello installation.

Using the Navigation Pane

The Navigation pane is shown in the image below.

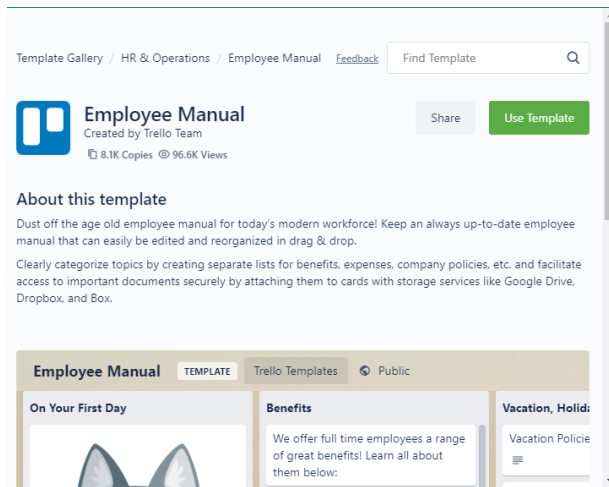

It contains the following components:

- **Boards.** Opens the Boards page in the Display Canvas.
- **Templates.** Expands the Templates menu in the left-hand Navigation Pane. Here, you can view template types by industry (for example, Business, Design, Education, Marketing, and so on). When you select an industry type (for example, *Design*), the right-hand Display Canvas populates with all the templates associated with Design (for example, Design Sprint and Game Design Template). Additionally, you have the option to submit a custom template that you designed by clicking *Submit a template*. Depending on what industry option you select, the Display Canvas will contextually change to show templates associated with that industry.
- **Home.** Navigates to the default landing page.
- **Teams.** Enables you to manage your teams, including the options to add a new team, view Highlights, All Team Boards, and Members, as well as toggle settings associated with your team.

Using the Display Canvas

The Display Canvas is shown in the image below.

It contains the following components:

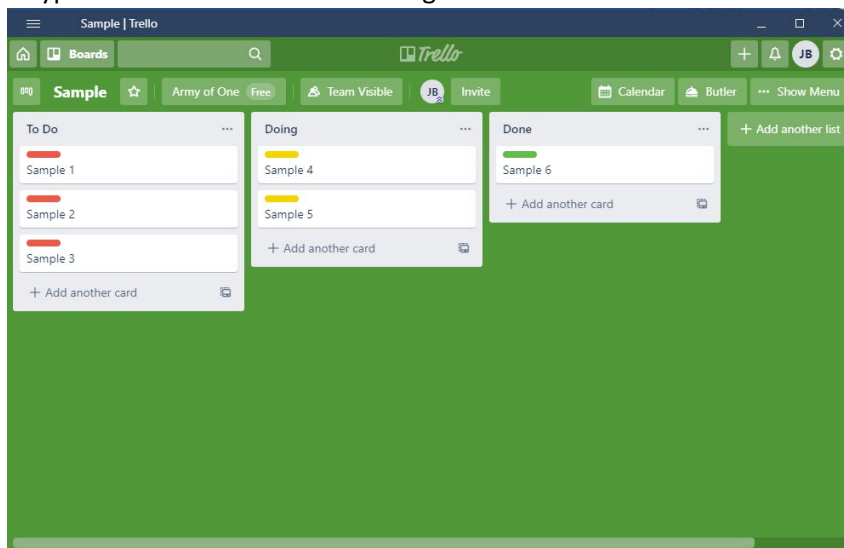

- Breadcrumb trail.** Enables easy navigation between hierarchies within a directory path. For example, if you are currently viewing the Employee Manual template and would like to navigate back to HR & Operations, click the *HR & Operations* link in the breadcrumb trail.
Note: This component is contextual, and only appears when you have a Template industry selected. It does not appear on the main landing page.
- View area.** The main canvas of Trello. Here, you can view and interact with templates, boards, teams, and various menus.
- Feedback.** Provides a simple form to submit feedback to the Trello team.
Note: This component is contextual, and only appears when you have *Template* selected in the Navigation Pane. It does not appear on the main landing page.
- Find Template.** A search bar that enables you to search for a specific template by name. Search results are indexed for quick retrieval.

Working with Boards

Boards are the primary workflow in Trello. They are composed of columnar lists, which indicate the status of a task, and cards, which indicate individual tasks inside of a list. You can build a board and add, remove, or customize lists to accurately reflect the stages of completion for your project. Likewise, you can create and customize individual cards to specify the tasks and requirements associated with each list. As tasks progress, you can click and drag cards from list to list to track the status of a task.

For more information on creating and accessing boards, see [Using the Ribbon](#) and [Using the Navigation Pane](#).

A typical board is shown in the image below.

It contains the following components:

- **Board views.** Toggles between board and calendar view.
Note: Cards are only visible in Calendar view if they have due dates assigned to them.
- **Title.** Displays the board title.
- **Star icon.** Enables you to assign importance to a board with a star. You can track starred boards in the Boards menu on the ribbon.
- **Team button.** Displays the team or associated with the board, and enables you to change the team or view the team page.
- **Visibility button.** Toggles board visibility. Options include Public, Organization, Team, and Private. The current visibility setting is displayed as the button name.
- **Account icon.** Displays the current user, with the option to edit profile information. Also provides the options to change user permissions and view board activity for members.
- **Invite.** Enables you to invite other users to your board through use of an email address or link.
- **Calendar.** Opens the Calendar view.
- **Butler.** Opens Butler, an insight tool that enables you to automate actions within your board through the use of commands. The following options are available:

- **Automation Tips.** Provides tips for automating your board. The number of tips that Butler identifies varies, based on your board.
- **Rules.** Assigns conditional rules to your cards using triggers and actions (for example, when Jared adds a card to the board, set the due date to 3 days).
- **Card Button.** Creates and assigns a button to a card that performs a specified action.
- **Board Button.** Creates and assigns a button to the board that performs a specified action.
- **Calendar.** Enables you to set up and deploy scheduled and recurring tasks for your board.
- **Due Date.** Creates automated actions that are triggered by the due date of a card (for example, a day before a card is due, move it to the top of the list).
- **Get Help.** Opens the Butler online Help webpage.
- **Connected Apps.** Manages connections with applications outside of Trello, such as Jira® or Slack®.
- **Account.** Displays the type of Butler account you currently have, as well as your command and operation quotas. Also provides a usage log to track the actions you have taken using Butler.
- **Show Menu.** Opens the board menu, where the following options are available:
 - **About This Board.** Displays information about your board, including the creator, description, and user permissions.
 - **Change Background.** Changes the background of your board. Options include color backgrounds or stock photographs.
 - **Search Cards.** Enables you to search for cards by term, label, member, or due date.
 - **Stickers.** Provides stickers that you can apply to your cards. You can add a sticker to a card by clicking it and dragging it from the menu to the card.
 - **More.** Provides the following additional options:
 - **Settings.** Opens the Settings menu for your board.
 - **Labels.** Enables you to create new labels and manage existing labels.
 - **Archived Items.** Enables you to view, retrieve, and delete archived items.
 - **Email-to-board Settings.** Enables you to manage your personal email settings associated with a board. Available options include your personal email string, the ability to generate a new address or having your personal string emailed to you, and the list and position where your emailed cards will appear.
 - **Watch.** Enables you to be a watcher on a specified board and receive notifications related to board actions.
 - **Copy Board.** Copies the board. You have the options to provide a new title, change visibility, and whether to keep cards and card templates.
 - **Print and Export.** Prints and exports your board. Available options include Print, CSV, and JSON.
 - **Close Board.** Closes the board.
 - **Link to this board.** Provides a URL for your board to share with other users.
 - **Butler.** Opens the Butler insight tool.

- **Power-Ups.** Provides additional features for your board, such as formulas, the ability to create Read-Me files in Markdown, and integration with Unito.
- **Calendar.** Views the Calendar Power-Up. Options include viewing, editing, and disabling the Power-Up.
- **Activity.** Provides a log of all activity associated with your board.
- **Back arrow.** Navigates to the previous menu.
Note: This icon is contextual and is only available when you select an option in the menu.
- **Add another list.** Adds a new list to your board. Click and drag lists to reposition them appropriately.
- **Lists.** A list indicates the status of tasks, and provides the option to add cards. By clicking the ellipsis button (...) at the top of a list, you can also copy, move, or watch a list, sort cards by name and date created, move or archive all cards in the list, or archive the list.
- **Cards.** A basic task unit in Trello. Cards are assigned to a list, and can be moved between lists as tasks are progressed or completed. When you click a card, a dialog box opens, where you can add or edit labels and descriptions, view user activity and write a comment. You can also add members, labels, checklists, due dates, attachments, covers, and Power-Ups, as well as move or copy a card, or make a card template. Additionally, by clicking the pencil icon, you can access a list of quick actions associated with your card.

III. Frequently Asked Questions

The following topic contains a list of frequently asked questions for [Template Boards](#), [Butler](#), and [Cards](#).

Template Boards

1. **Does Trello provide sample template boards for new users?**

Yes. You can access user-submitted template boards that have been created for specific projects and then repurpose them for your needs.

2. **Can I share template boards with anyone, even if they are not Trello users?**

Yes. When viewing a template board, click the *Share* button to get a URL of your template. You can then click *Copy* to copy the URL to your clipboard and then paste it in your desired location. Please note that anyone on the Internet with this URL will be able to see this template, so use discretion if handling sensitive information.

3. **If I share a template board with someone, will they be able to make changes to it?**

No. If you are sharing a template board URL publicly, the template will be view-only. While the board may be visible to anyone with the provided URL (including Google), only board members have permission to make changes.

4. **How do I restrict the ability for other users to see my template board?**

Navigate to the title area of your board and click the visibility button to open the Change Visibility dialog box. Here, you can toggle visibility options to *Public*, *Organization*, *Team*, and *Private*. Note that the button name changes based on the current visibility setting for your board.

5. **How do I create a blank template?**

In the ribbon, click the *+* icon and select *Create board*. You will be given the options to provide a title, assign it to a team, choose a sample background image, and control its visibility and who can edit it. Once you have done this, click *Create Board*.

6. **How do I submit a template board that I created so other people can use it?**

In the Navigation Pane, under Templates, click *Submit a template*. Then, in the Display Canvas, click the *Get Started* button, and follow the process to submit your template to the Trello Community.

Butler

1. **What is Butler?**

Butler is an insight tool embedded within Trello. It enables users to automate actions for a card or board, as well as perform specific tasks when certain conditions are met.

2. **How do I access Butler within Trello?**

When working in your board, on the top-right corner, click *Butler* to open the Butler menu, where you can choose from a list of actions to apply to your workflow.

3. **Is Butler included with a free Trello account?**

Yes, but with very limited functionality. The version of Butler included with a free Trello account is meant to be an introduction to the capabilities of the tool. To leverage the full power of Butler, purchasing Trello Gold, Business Class, or Enterprise Class is required. For more information on Butler service tiers, please see the Trello online Help topic regarding [Butler Features and Quotas](#).

4. **Is Butler considered a Power-Up?**

No. Although there is a one Power-Up limit per board per month for a free Trello account, Butler is not included as an option.

5. **How do Butler commands work?**

Butler commands are executed by taking a task or condition and assigning it an action. For example, you can create a rule stating that when a card is added to a specific column within your board, a specified user is assigned to that card. For more information on Butler commands, see the Trello online Help topic [An Introduction to Butler](#).

6. **Do Butler command quotas apply to paid members?**

Yes. Each user has a personal quota that applies to boards outside of their Business Class or Enterprise subscription. Additionally, both Business Class and Enterprise versions of Trello have pooled quotas for all users. These quotas are reset on the first day of each month.

Cards

1. **How do I edit a card once I have created it?**

When working in your board, click the card that you want to edit. A dialog box opens, where you can change the information associated with the card (for example, labels, members, description, due date, and so on). Alternatively, you can click the pencil icon on the right side of the card for a quick list of common actions you can perform.

2. **Can I change the positioning of my lists?**

Yes. Click and drag the list you want to move, and reposition it within the board.

3. **Why do I see my cards on the board but not in the calendar?**

In order to see your cards in the Calendar view, you must assign due dates to your cards. To do this, edit each card and specify a due date (optionally, you can specify a time, as well). Your cards will now appear on the calendar.

4. **Can I move multiple cards in one action, or do I have to drag each card individually?**

You can move all cards associated with a list by clicking the ellipsis button (...) on the top right of the list and selecting *Move All Cards in This List*. A dialog box opens, where you can click the list to where you want your cards moved. Once this is done, the cards will appear alongside any other cards currently in the target list. Note that this only works for all cards in a list, and if you want to move individual cards, it may be better to click and drag those specific cards individually.

5. **I accidentally archived a card! How do I get it back?**

On the board page, click *Show Menu* and then click *More*. Select *Archived Items* and search for the card you archived. Once you have identified the card, click *Send to Board*. Your card will appear in its original list.

Note that it is not possible to retrieve an archived card using the Undo command.

6. **Will I be able to retrieve a card once I have deleted it?**

No. If you delete a card, the card and all information associated with it will be permanently removed. You cannot undo this action.

IV. Editing Task

Organizations must be capable of reacting rapidly to cyberattacks in order to help minimize the possibility of long-term material impacts. Developing superior, integrated, and automated response capabilities enables the quick activation of non-routine leadership and crisis management, as well as coordination of enterprise resources. Additionally, specific areas within an organization, including critical assets, must be protected in ways that meet their own security requirements and address potential vulnerabilities.

Advanced organizations think proactively, making use of cyber threat modelling to not only identify top threats, but also prepare responses and countermeasures. To achieve these goals, it is necessary to have a well-documented, structured approach that starts with detailed planning and preparation, as well as simulation exercises that help anticipate threats. This includes putting an incident response (IR) plan in place, which should address the phases defined by the [NIST Computer Security Incident Handling Guide \(SP 800-61\)](#), as follows:

1. Preparation
2. Detection and Analysis
3. Containment, Eradication, and Recovery
4. Post-Incident Activity

To prepare for potential incidents, it is important to implement organization-wide measures, such as user awareness training, hardening host and network security, preventing malware, and conducting periodic risk assessments to identify and neutralize vulnerabilities.

When an incident is first identified, it is triaged, or categorized, and security teams will take steps to contain the impact. These include determining the attack vector, such as an email phishing attempt, web-based cross-site request forgery (CSRF), or an attack carried out internally by external/removable media (for example, a USB stick).

By investigating the root cause of the attack, the issue can then be remedied so that organizational security may be brought back to a stable condition. This includes documenting the facts of the incident, developing a containment strategy, and working to recover lost resources.

During this process, it is of vital importance to engage decision-making expertise and maintain reporting lines within the organization. Security teams must also concentrate on identifying, engaging, and coordinating with trusted third parties, such as strategic business partners, law enforcement, and specialist attorneys, which are required when a breach occurs.

One important step that is often overlooked is a follow-up, post incident. It is the responsibility of the security team to provide the organization with lessons learned in order to enable long-term improvements, and bolster the organization's ability to block threats and prevent future breaches.

Every cyberattack is different, just as every organization is different. Each organization will require its own security and defense plan that meets the needs of its specific infrastructure and policies, and maintains the capability and readiness to block threats.

V. Trello and Its Uses in Project Management

Use Case Name: Due the Next Day

Actors:

- Members (first and second)
- Trello Board

Triggers:

- A reminder is triggered, as a visual cue, that a card is due the next day.

Preconditions:

- A board has been created.
- A card has been created, with a title, description, and due date.
- A reminder has been applied to the card's due date, which provides a visual cue in the card.

Postconditions:

- The task associated with the card is completed accurately and in a timely fashion, with multiple users commenting and offering input.

Normal Flow:

1. While reviewing the board for cards that are currently in the To Do list, the first member will notice that one card at the bottom has a due date notification.
2. The first member will open the card, and note that the task associated with the card is due the next day.
3. The first member will review the description associated with the card to understand the scope of the task.
4. The first member will indicate to the second member that this task is being worked on, by commenting in the card.
5. The first member will move the card, on the board, from the To Do list to the Doing list.
6. Once the task associated with the card has been completed, the first member will tag the second member assigned to the ticket, by commenting in the card, indicating that the task is ready for review.
7. The second member will review the task.
8. The second member will sign off on the task, indicating that the card can be moved to the Done list and marked as Complete, by commenting in the card.
9. The first member will move the ticket to the Done list.
10. The first member will open the card and check the Due Date check box to indicate completion.

Alternate Flow:

3A1. The first member will see that the description in the card is missing information.

1. The first member will tag the second member, by commenting in the card, to request more information regarding the task.
2. The second member will edit the card and fill in a more complete description of the task.
3. The second member will tag the original member, by commenting in the card, indicating that the card is ready.

7A1. The second member will review the task, and comment that there is an error that requires correction.

1. The member will correct the error in the work.
2. The member will resubmit the card to the second member for review and signoff.

Summary: Because a visual reminder of the due date was applied to the card, the members were able to take swift action and complete the task. Otherwise, the time-sensitive task might have gone unnoticed or been neglected at the cost of project completion. Instead, it was identified in time, and did not jeopardize the company's ability to complete its work.
